Script

You must fill 2 minutes of time and basically explain what our project has been about. Here are some pointers.

Slide 1-3

- Mention who you are and who you've done the project with.
- Explain what our theme was "Education".
- Try and read/summarise slide 3 that explains the scope of the project.

Slide 4-5

Explain what the diagrams are for and that we've done several of them to illustrate our system as best as possible.

Use Case: Used to visually show and define the requirements of the important parts.
of the system.

Sequence Diagrams: Used to understand the requirements for a new system and its processes. (Done for each user story) Mention we have generated 10 user stories to simulate daily use and potential features.

Class Diagram: The class diagram describes the structure of our system. It shows and describes the system's classes, attributes, methods, and the relationships.
between the objects.

Architecture Diagram: Software architecture diagrams visually represent software components, relationships, and system interactions.

Slide 6-9

Just mention that this is our User Interface we've designed.

- Its clear and clean cut
- One accent colour
- Easy to move around the different areas of the system
- Different types of users (i.e teacher/student/staff member) would have different types of access to the app. Like teachers get access to student grades, but students would only get access to their own.

Slide 10-11

Mention we have created 9 test scenarios in which we show what the program does, what it is

intended to do and to discover any defects or potential issues before it is developed and implemented.

Slide 12

Just mention the last slide explains how the work has been divided.

Please make sure you say as much as possible about the project Ill send you the final report, use it for inspiration.
